to protect a vital medical facility.**

Polyfoam Roof

*“They do what they say,
and deliver when they say
they’re going to deliver.”*

*Eric Wilkins
Real Estate Developer*

CANCER CARE CENTER IN FRESNO, CALIFORNIA

The challenge

With their specialized construction and abundance of lifesaving equipment, medical facilities present unique challenges when it comes to roofing. The Cancer Care Center was no exception with its two-story design incorporating numerous odd angles and an abundance of mechanical equipment. Reroofing this facility for insulation and waterproofing purposes would be a true test of our skills and capabilities.

The process

- 1 1/2” polyfoam roof system
- 30 mil acrylic elastomer top coat

The result

The polyfoam roof we installed over the building’s weathered plywood proved to be the ideal solution for creating a seamless, waterproof roof with enhanced insulation value. Almost immediately, the facility enjoyed a 30% reduction in energy costs. The client was so pleased with the results, they have since trusted Barrier with several additional projects.

*“Barrier shows a strong commitment to
problem-solving. They’re very proactive
in dealing with the issues. They’re very
knowledgeable. They’re very honest.
We’ve had an excellent experience with
them every time. I’ve recommended
them and would continue to
recommend them on every type of
roofing solution that they provide.
Barrier is an excellent contractor.”*
